Innovative Solutions for Glass Production

New Product Launch

The T2 intelligent Lehr Loader is introduced

Sheppee are pleased to announce the launch of a new Three Axis Servo Lehr Loader, the most intelligent stacker introduced into the glass industry.

Four years of development work with industry experts has seen the completion of the new T2 stacker. The timely completion of this development project is perfect as IS Machine production speeds have greatly increased over the last two years, as well as bottles becoming significantly lighter.

The first T2 Stacker has been installed on a high performance NIS 12 section Quad Gob IS Machine in Turkey. This replaced the previous supplied stacker which was running on its operating limit.

As well as delivering a significant performance increase, the new T2 Stacker has an intelligent interface allowing the customer to enter minimal information about the container and production data into the 15" touch screen.

The Stacker brain uses advanced optimization techniques to work out the smoothest possible deceleration from cross conveyor speed to Lehr speed. All this is achieved without the need for the operator to do any significant alterations on start up thus reducing job set up time. The new Three Axis T2 Lehr Loader is available now.

Key Features & Benefits

- Operating speed upto 25 cycles per minute (with a maximum Cross Conveyor speed of 55m/minute)
- Simple and easy job set up.
- Intelligent optimisation software
- Enhanced motion control
- Industry recognised industrial components
- On Line remote dial in for process and maintenance purposes
